

Drilling Electrical: Control Cabin

A robust and secure 10ft container containing switchgear, power distribution, pump controls, telemetry and remote controls for operating electrical pumps on a drill site.

Unique to WJ, the container has the most up to date variable speed drive starter panels which allow for pumps up to 200kw to be operated without exceeding the maximum operational power.

Designed to be set up and operated as 'plug and play' the cabin ensures that equipment and cables are protected from construction site hazards.

The remote control allows the Lead Driller to control the flush rate, return rate & sand shaker speed without leaving his drill rig work station. An emergency stop button is included on the controls.

Technical Data	
Weight	1,700 kg
Width	2,100 mm
Length	2,100 mm
Height	2,200 mm
Switchgear Rating	300 KvA
